Socialstyrelsen klassificerar sin utgivning i olika dokumenttyper. Detta är *Statistik*. Det innebär att rapporten innehåller sifferuppgifter som Socialstyrelsen samlat in, registrerat, bearbetat, sammanställt, analyserat och/eller kommenterat. Uppgifterna beskriver läge, tillstånd och/eller utveckling. Viss statistik ingår i Sveriges Officiella Statistik (SOS) och är då indelad i tre serier: Socialtjänst, Hälsa och sjukdomar och Hälso- och sjukvård.

Preface

The Swedish Cancer Registry was established in 1958. In this publication the Centre for Epidemiology (EpC) at the National Board of Health and Welfare presents its 48th annual report on the incidence and prevalence of cancer in Sweden. It comprises the material for 2005 and a description of trends covering the period of 1960-2005.

In the present report the rates are age standardized according to the population January 1, 2000. A comparison between different age standardizations are shown in Figure A.

The cumulative probability to develop cancer is presented in chapter 8.

The prevalence of cancer in Sweden is presented in chapter 9.

Site and histopathology ("morphology") of the tumors has been coded in the ICD-O/3 systems of topography and morphology as of January 1st 2005.

In the present publication, ICD-O/3 figures for coding site have been translated to comply with earlier ICD-7 praxis, and are presented in the main tables according to ICD-7. Table W1 show that, for all practical purposes, such a translation is feasible.

1 Material

According to Regulations by the National Board of Health and Welfare (SOSFS 2006:15) all physicians in hospitals and other establishments for medical treatment under public or private administration in Sweden must report all cases of cancer ("Clinical report", Appendix 3) to the Cancer Register. Furthermore, pathologists and cytologists separately report every cancer diagnosis on surgically removed tissues, biopsies, cytological specimens, bone marrow aspirates and autopsies. Thus, the majority of cases are notified twice, in separate reports. Only persons that have official residency in Sweden are included in the Cancer Register.

The registration of new cancer reports and the major check-up and correction work is performed by six regional cancer registers covering the whole country. These registers are associated with the oncological centre in each medical region of Sweden (Stockholm-Gotland, Uppsala-Örebro, Linköping, Lund-Malmö, Göteborg and Umeå). The regionalization implies a close contact between the register and the reporting physician which in turn alleviates the task of correcting and checking the material. Annually the regional registers send information of newly registered cases and corrections concerning those previously reported to the National Cancer Register.

The present publication comprises statistics on cases of cancer diagnosed in 2005.

The following diseases are to be reported to the National Cancer Register.

- A All definitely malignant neoplasms (e.g. carcinoma, sarcoma, malignant lymphoma, leukemia and malignant teratoma).
- B Carcinoid tumors of digestive and other organs, granulosa cell tumors of the ovary, thymomas, adamantinomas and chordomas.
- C Histologically benign tumors of the central nervous system and meninges, transitional cell papillomas of the urinary tract, all hormonally active tumors of the endocrine glands (except the thyroid) and the entero-chromaffin and neuroendocrine systems.
- D Precancerous lesions of lip, mouth, larynx, bronchus, trachea, cervix uteri, skin, vulva and vagina, gastro-intestinal polyps with suspected malignancy, "bronchial adenomas", atypical epithelial proliferations of the breast (carcinoma in situ type) and adenoma phyllodes, precancerous endometrial lesions, hydatidiform moles of placental tissue, and ovarian cystadenomas of borderline type.

Diseases mentioned under A - C are included in the total cancer incidence (Tables F, G, I, J, K and 1-10), although a number of the tumors listed under C are considered not to be "infiltrating and metastasizing" (Table G).

The benign tumors and precancerous lesions mentioned under D are listed in Table H.

If a person has more than one primary tumor, each tumor is registered separately. This also applies for tumors appearing in the same parenchymal organ, provided the neoplastic tissues and histogenetic properties differ among the tumors (for instance, if one neoplasm is a carcinoma and another a sarcoma). Each new primary tumor in the skin, intestine and urinary tract is registered.

Information from death certificates is available to the Register, supplying date and cause of death. Death certificates until December 31, 2004 have been merged with the files of the Cancer Register 1958-2004. Due to the fact that the Cause of Death Register has not been updated to 2005, 2004 is the last year available. Cancer diagnoses based on death certificates are not registered.

The persons in the Cancer Register have also been followed up regarding to migration through Statistics Sweden.

2 Information available in the Cancer Register

2.1 *Data in cancer reports*

- Unique personal identification number composed of 8 digits based on century, year, month and day of birth, supplemented with the so-called registration number (3 digits) and a check digit
- Sex
- Domicile (county, municipality, parish)
- Hospital
- Hospital department
- Pathology/cytology department
- Specimen number, and year when specimen was taken
- Site of tumor. The basic coding has been performed according to:
 - ICD-7 1958-1986 (WHO/HS/CANC/24.1)
 - ICD-9 1987-1992 (WHO 9th revision 1976)
 - ICD-O/2 1993-2004 (2nd Edition WHO Geneva 1990)
 - ICD-O/3 2005-w (International Classification of Diseases for Oncology, 3rd Edition. WHO Geneva 2000)The different classifications are translated to ICD-7 to enable longer trends. For exceptions cf. Appendix 1.
- Tumor serial number
- Malignancy (yes/no)
- Histological type (WHO/HS/CANC/24.1 Histology Code). From 1993 according to ICD-O/2 and from 2005 according to ICD-O/3 (International Classification of Diseases for Oncology, Third Edition. WHO Geneva 2000)
- Stage according to TNM ((TNM Classification of Malignant Tumours, 6th Edition, 2002, Leslie H. Sobin and Ch. Wittekind)

- Basis of diagnosis:
 - 1 Clinical diagnosis only
 - 2 X-ray
 - 3 Histological examination of surgical or biopsy material (patho-anatomic diagnosis, "PAD")
 - 4 Autopsy with histopathological examination of surgical or biopsy material
 - 5 Cytological diagnosis
 - 6 Gross examination at surgery
 - 7 Autopsy without histopathological examination
 - 8 Other
- Date of diagnosis (century, year, month, day)
- Diagnosis made incidentally at autopsy (yes/no)

2.2 *Data from the Cause of Death Register*

- Date of death (century, year, month, day)
- Cause of death. Main underlying cause, according to:

ICD-7	1958-1968,	ICD-8	1969-1986,
ICD-9	1987-1996,	ICD-10	1997-w

3 Reporting procedures and controls of the material

The reports are registered continuously at the regional cancer registers. Usually a notification from the pathology/cytology lab arrives first, followed by a clinical notification. Whenever reports arrive separately, they are registered with a flag to show that one report is lacking. If the missing report does not arrive within three months, a reminder is sent out. In 20-30 per cent of the cases, reports have to be traced according to this scheme. If the missing report does not arrive, the required information can be taken from the hospital case record, if available. If this source of information is also lacking, registration is done on the basis of the information that is available at hand. The percentage of cases with such an incomplete registration is less than two per cent.

A small number of cases (annually some hundred) are reported too late to be included in the publication. These cases are added to the register whenever they arrive.

An estimation of the under reporting of cancers can be done by comparing the Cancer Register data with the Cause of Death Register (see next chapter).

The material passes through the following controls:

- the identification number is checked against the register covering the total population of Sweden
- duplicates are subject to special checking
- the validity and logical contents of the codes are checked when the material is processed.

4 Validity of the data

Approximately 99 per cent of the cases are morphologically verified (Table 8). The reliability of the diagnosis may vary with the hospital, department and/or physician concerned; this may add to a geographical variability, though the structure of the public health system is homogeneous. The availability of facilities for pathology service likewise varies. The reliability of the diagnosis also varies with age and type of disease.

The figures on incidence from the Cancer Register include data on cases of cancer found incidentally at autopsy. The contribution from this additional source varies with site and type of tumor. Variations in the incidence of a particular type of tumor in a certain geographical region may partly be due to differences in frequency and thoroughness of the autopsy examination and the histologic examination of the autopsy specimens. Cancer of bronchus/lung, pancreas, colon, liver and prostate are often overlooked at clinical examinations but are found incidentally at autopsy. Table 3B gives the number of all cases found incidentally at autopsy by site, sex and medical region.

The Swedish Cancer Register does not use information on cancers based on death certificates, the reason being that the data on the death certificates in many instances are uncertain - especially regarding old persons - as shown in a separate analysis (1).

In 2004, there were 2 467 persons in the Cause of Death Register with cancer stated as underlying cause of death which were not on file in the Cancer Register 1958-2004. The most common cancer sites were - as noted previously - bronchus/lung, pancreas and prostate. The distribution by sex, age, and autopsy is shown in Table A1 and Table A2. The figures show that most of the cases are 75 years of age, or older, and not autopsied.

Due to the fact that the Cause of Death Register has not been updated to 2005, 2004 is the last year available.

5 Statistical terms

Age

The age of the patient at the date of diagnosis.

Crude incidence rate

The total number of cases divided by the corresponding mean population per 100 000. Rates for males and females are calculated separately.

Age specific incidence rate

Number of cases for each five year age-group divided by the corresponding mean population per 100 000. Rates for males and females are calculated separately.

Age standardized incidence rate

In Tables E, K and 4-6, the figures have been adjusted for age distribution to the Swedish population January 1, 2000. In order to facilitate international comparisons, the incidence rates have also been adjusted to the world standard population (Tables E, 4 and 7). In the latter table the sites 204-209 (leukemia, polycythæmia vera and myelofibrosis) are aggregated. The standard populations and more details on definitions of statistical terms are given in Appendix 2.

Cumulative probability of developing cancer

In Table I the cumulative probability to develop a cancer before a certain age has been estimated from the age specific incidence rates in Table 4.

Prevalence

In Table J the number of resident persons in Sweden December 31, 2005 with a diagnosed cancer were counted as the prevalence. The calculations were done for two recruiting periods: the whole registry 1958-2005, and to enable comparisons between years, the last five year period 2001-2005.

Trend

The trends over time are calculated from the age adjusted figures on tumor rates in 18 different age groups. In Table K the trend figures for both the last 10 and 20 years are presented. The time series of age standardized rates plotted in Figures F1-F28 cover the period from 1960 to 2005.

Comparisons between trends covering different time periods should be made with caution since diagnostic methods may vary, and coding practices change. Furthermore, in the trend periods shown in the present publication, the age structure of the population, the autopsy frequency (recent figure 14 per cent, compared to 50 per cent in the seventies), and type and forms of screening activities vary.

6 The population of Sweden

The life expectancy at birth in Sweden for 2005 was 78.4 years for males and 82.8 for females. Some demographic data for the population are given in Tables B - D.

Table B: Selected population data for Sweden 2005, by sex

	Males	Females	Total
Mean population	4 476 431	4 553 142	9 029 572

7 Total cancer incidence 2005

The incidence is based on a total of 50 994 cancers reported to the Swedish Cancer Register in 2005, 615 cases of them were found incidentally at autopsy.

The number of persons with cancer diagnosed for the first time in 2005 was 42 589 (22 799 males and 19 790 females); thus 8 405 cancers were diagnosed in persons with at least one previous cancer diagnosis. The distribution of all reported cancers is given by sex in Table E below.

CANCER INCIDENCE IN SWEDEN 2005

CANCER INCIDENCE IN SWEDEN 2005

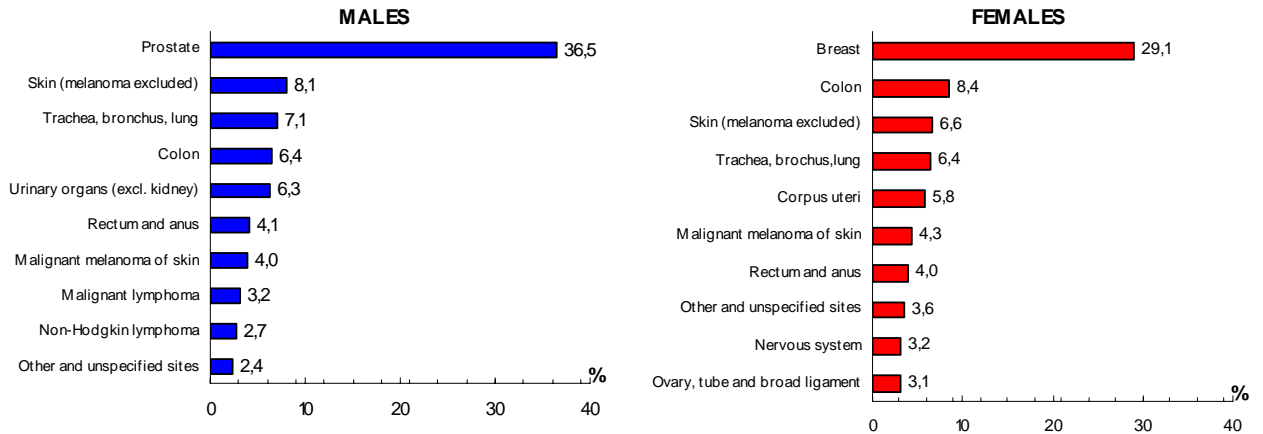

Figure A: Comparison between different methods of calculating incidence rates per 100 000, by sex

The percentage distribution of the ten most frequent forms of cancer is given in Figure B below. The cases cover 80.8 per cent of all male cancer. The corresponding figure for females is 74.5 per cent.

CANCER INCIDENCE IN SWEDEN 2005

Figure B: The ten most frequent specified cancer sites, by sex

The age-specific incidence rates for all cancer are shown in Figure C. The graph illustrates that cancer mainly is a disease of the older age groups. In the age groups from 30-34 to 55-59 years, the incidence is higher among females, mostly because of the dominance of breast and genital cancer.

CANCER INCIDENCE IN SWEDEN 2005

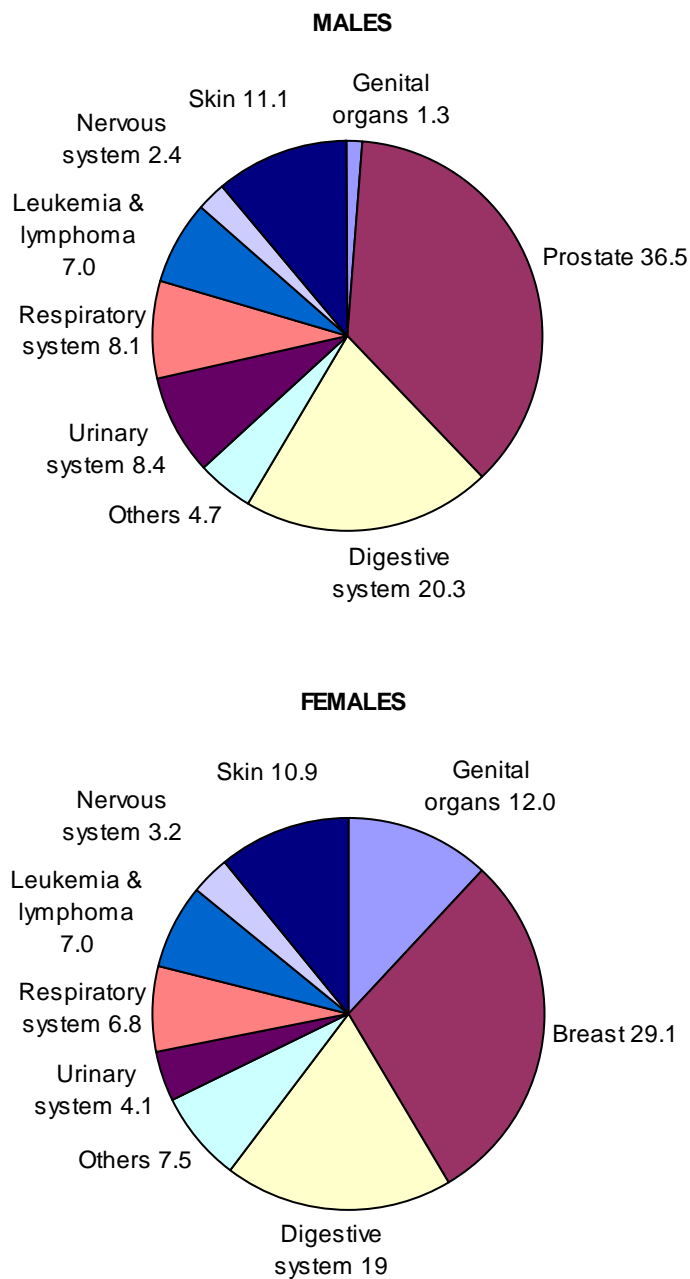

Figure C: Age-specific incidence rates per 100 000. All sites, by sex

In Figure D, closely related cancer sites have been grouped and presented by sex. The distribution by individual site and sex, is shown in Table F.

Preleukemia	124	113	237

8 Cumulative probability of developing cancer

The risk of developing cancer varies strongly with age and by site.

Table I shows the probability to develop a specific cancer up to a certain age for selected sites. Only sites with a life-time probability (up to age 75) of approximately one per cent are presented in the table.

Note: The probability has been estimated from the age specific rates in Table 4.

9 The prevalence of cancer in Sweden

The number of persons resident in Sweden December 31, 2005 and diagnosed with a cancer in the periods 1958-2005 and 2001-2005 are shown in Table J. For simplicity all persons are considered as prevalent cases, although some might be cured from their disease.

Some individuals may have more than one primary diagnosis. In all sites each person is counted only once. For the single sites they are counted once for each diagnostic group.

The prevalence of a disease is affected by demographic, diagnostic and treatment factors that all may change over time:

- the incidence of the disease
- the age distribution
- early diagnosis
- length of survival

This fact makes prevalence time trend analyses complex.

CANCER INCIDENCE IN SWEDEN 2005

Table J: Prevalence of cancer in Sweden as of December 31, 2005 for cases diagnosed 1958-2005 and 2001-2005, and as a comparison the number of persons diagnosed 2005, by site and sex

* In all sites each person is counted only once. For single sites the persons are counted once for each diagnostic group.

10 Trends in the cancer incidence

Factors that affect trends include changes in coding practices, age structure of the population at risk, and the autopsy frequency, as well as the introduction of screening activities and improvements in diagnostic practices. For this reason, conclusions may be difficult to draw from trend figures covering long time periods. In the presentation of the trends, we present figures both for a 20-year period and the latest decade (Table K).

The annual number of cancer cases in Sweden has increased constantly during the last two decades. The average annual increase is 1.6 per cent for men and 1.1 for women. About half of this increase is explained by the continuous ageing of the population. This is seen in the graphs in Figure A (page 15) where the crude rates are compared with age standardized rates.

The average annual changes in time trends are calculated according to an exponential model (the end of Appendix 2) with the age standardized incidence rates as point estimates.

The average annual increase in the age standardized rates for all cancer is 0.8 per cent for men and 0.5 per cent for women during the complete period. The figure for the period 1996-2005 is 1.7 for males and 0.7 for females.

An increase in the trend for the years 1986-2005 is seen e. g. for the following sites:

- **Malignant melanoma of skin.** Seen over a 20-year period, this is one of the most rapidly increasing malignant tumors in Sweden. For men, the average increase per year is 2.2 per cent and for women 1.9 per cent.
- **Non-melanoma skin cancer** (mainly squamous carcinomas). An average annual increase of 3.2 per cent is observed for men and 3.8 for women for the 20-year period. During the latest 10-year period the figures are 3.4 per cent for men and 3.7 per cent for women.
- **Bronchus and lung, primary.** Women show a rather strong average increase per year, 3.0 per cent, while the previously noted increasing trend in males has turned to a decrease of 0.9 per cent calculated for the 20-year period. The difference in incidence (crude) between the sexes is however still some 7 cases per 100 000.
- **Breast cancer in women.** The annual increase is 1.4 per cent for the 20 year period and 1.4 for the 10-year period.
- **Prostate.** This is the most common cancer site in men with an average annual increase of 2.9 per cent during the 20-year period. For the last 10-year period the increase is 4.6 per cent.

CANCER INCIDENCE IN SWEDEN 2005

* Implies that the trend is considered to be strictly increasing or decreasing at the 98% confidence level

- **Testis.** An average annual increase of 1.7 per cent is seen for the 20 year period and 2.5 for the 10-year period.
- **Urinary organs** (excluding kidney). The increase for men during the 20-year period is 0.3 for men and for women 0.6 per cent a year. For the last 10-year period the increase is 0.6 for men while the trend is decreasing by 0.1 for women.

A decrease in trend is observed e.g. for Hodgkin disease, cancer of lip in men, and for cancers of

- **Cervix uteri.** The age standardized rate has decreased with 1.3 per cent a year for the 20-year period. This is evidently in great measure an effect of screening activities. The incidence seems to be leveling out at a rate of approximately 10 per 100 000 during the late 1990s.
- **Stomach.** There is a remarkable decrease in incidence for both men and women during the 20-year period (3.9 per cent for men and 3.9 per cent for women). Corresponding figures for the last 10-year period is 3.8 for men and 3.1 for women.

The rates in the incidence of cancer in various sites during the period 1960-2005 are plotted and presented in Figures F1-F28. For many sites, the number of cases are few and random variations play an important role for the configuration of the graphs.

Please note that different scales are used among the figures. The rates are age standardized according to the Swedish population January 1, 2000.

APPENDIX 1

The major exceptions from the codes in the 7th WHO revision (WHO/HS/Canc/24.1. Code for anatomical location).

Site 158 (peritoneum) only includes malignant mesotheliomas of peritoneum, while metastatic lesions are referred to site 199.3.

Site 159 (unspecified digestive organs) has not been used. Such cases are included in site 199.

Site 162.2 (pleura) only includes malignant mesotheliomas.

Site 164 (mediastinum). Thymomas are referred to site 195.2.

Site 172 (corpus uteri) only includes malignant epithelial tumors of the mucosa.

Site 173 only includes malignant chorionic lesions (invasive mole and choriocarcinoma).

Site 174 (uterus, unspecified) includes carcinomas growing in both corpus and cervix uteri (or carcinoma uteri NOS), and uterine sarcomas.

Site 180.1 and 181 include papillomas of the urinary tract.

Site 191. Basaliomas are excluded.

Site 193.0 and .1 include histologically benign tumors of the central nervous system and meninges.

Site 193.3 includes malignant tumors of peripheral nerves and the sympathetic nervous system, irrespective of possible organ connection.

Site 195 (other endocrine glands) includes all benign and malignant tumors, though adrenocortical adenomas have been included only if they have given endocrinological symptoms.

Site 197 includes soft tissue sarcomas without organ connection, and also retroperitoneal tumors (197.4).

Site 198 (lymph nodes) has not been used. Metastatic tumors have been referred to site 199.

Site groups 204-207 (leukemia) are coded according to ICD-8.

Definitions of statistical terms

Age is defined as the date of diagnosis (year, month, day) minus the date of birth (year, month, day), the so-called exact age.

Those in the age-group x to $x+4$ years are born during some of the years $t-5, t-4, t-3, t-2, t-1$ or t . Lexis diagram.

The age-specific incidence rate $\frac{d}{n} m_x^t$ for the diagnosis d in the age-group x to $x+n-1$ years during year t is given as

$$\frac{d}{n} m_x^t = \frac{\frac{d}{n} I_x^t}{\hat{L}_x^t} = \frac{\frac{d}{n} I_x^t}{\frac{n P_x^t + n P_x^{t+1}}{2}} \quad \text{where}$$

$\frac{d}{n} I_x^t$ is the number of new cancer cases for the diagnosis d in the age-group x to $x+n-1$ years during year t ;

$$\hat{L}_x^t = \frac{n P_x^t + n P_x^{t+1}}{2} \quad \text{is the mean population of Sweden in the age-group } x \text{ to } x+n-1 \text{ years during year } t;$$

$n P_x^t$ is the population of Sweden at the beginning of year t in the age-group x to $x+n-1$ years;

$n P_x^{t+1}$ is the population of Sweden in the same age-group at the beginning of year $t+1$.

n is equal to 5 for all ages except for those older than 85 where it is an open interval ($85+$ or $85-\omega$).

The crude incidence rate $\frac{d}{m} t$ for the diagnosis d and year t is given as

$$\frac{d}{m} t = \frac{\frac{d}{n} I_x^t}{\hat{L}^t} \quad \text{where}$$

$$\frac{d}{n} I_x^t = \sum_x^{\omega} \frac{d}{n} I_x^t ;$$

$$\hat{L}^t = \sum_x^{\omega} \hat{L}_x^t$$

To be able to compare the cancer incidence in different years - and avoid the influence of differences in age distribution - direct standardization is used to

provide **the standardized incidence rate** d_m^t .

$$d_m^t = \sum_x^{\omega} W_{xn} d_{mx}^t \quad \text{where}$$

ω = maximum age

W_{xn} is the percentage of the standard population for the age-group x to $x+n-1$ years.

The standard populations used in this publication are given below.

Age standardized rates for the counties are calculated with weights from the Swedish population January 1, 2000.

Standard populations

Age	The Swedish pop 2000 %	The world population * %
0-4	5.3	12.0
5-9	6.9	10.0
10-14	6.4	9.0
15-19	5.7	9.0
20-24	5.9	8.0
25-29	6.7	8.0

35-39	6.9	6.0
40-44	6.6	6.0
45-49	6.6	6.0
50-54	7.4	5.0
55-59	6.3	4.0
60-64	4.9	4.0
65-69	4.3	3.0
70-74	4.1	2.0
75-79	3.9	1.0
80-84	2.6	0.5
85+	2.3	0.5
Total	100.0	100.0

* Cancer Incidence in Five Continents, Volume VIII, IARC, Lyon 2002.

The linear regression model is of the form $Y = e^{a+bx}$ or equivalent $\ln Y = a + bx$, where

Y = estimated annual age standardized incidence rate per 100 000

x = calendar year minus the midpoint of the period

$$a = \overline{\ln y} = \frac{\sum \ln y}{n}$$

n = number of calendar years

y = observed annual age standardized incidence rate

$$b = \frac{\sum x(\ln y - \overline{\ln y})}{\sum x^2}$$

The variance of the regression coefficient b is

$$s_b^2 = \frac{S^2}{\sum x^2}, \text{ where}$$

S^2 , the variance around the regression line, is defined by the formula

$$S^2 = \frac{\sum (\ln y - \overline{\ln y})^2 - b \sum x(\ln y - \overline{\ln y})}{n - 2}$$

The test statistic $T_{0.02/2} = \left| \frac{b}{s_b} \right|$ corresponds to the Student's t-distribution with $n-2$

degrees of freedom and tests on the 98 per cent confidence level if the slope parameter b in the equation

$\ln Y = a + bx$ deviates significantly from zero.

From the equation $\ln Y = a + bx$ it follows that $Y = e^a e^{bx}$, where e^a represents the geometric mean of the annual standardized incidence rate and $100b$ corresponds to the average annual percentage change.

11 Coding according to ICD-O/3 and translation to earlier ICD versions

The coding of site has been done according to ICD-O/3. An overview of the coding of site is given in Table W1 as well as translations to other ICD versions.

The side of a pairy organ is coded separately, while . The following sites or subsites are now given side codes:

C06.0	Cheek muccosa
C08.0	Submandibular gland
C08.1	Sublingual gland
C09.0	Tonsillar fossa
C34	Bronchus and lung
C38.4	Pleura, NOS
C40	Bones, joints and articular cartilage of limbs
C41	Bones, joints and articular cartilage of other and unspecified sites
C44.1	Eyelid
C44.2	External ear
C44.6	Skin of upper limb and shoulder
C44.7	Skin of lower limb and hip
C49.1	Connective, subcutaneous and other soft tissues of upper limb and shoulder
C50	Breast
C57.0	Fallopian tube
C57.1	Broad ligament
C57.2	Round ligament
C57.3	Perametrium
C57.4	Uterine adnexa
C62	Testis
C63.0	Epididymys
C63.1	Spermatic cord
C64	Kidney
C65	Renal pelvis
C66	Ureter
C69	Eye and adnexa
C71.0	Cerebreum
C71.1	Frontal lobe
C71.2	Temporal lobe
C71.3	Parieltal lobe
C71.4	Occipital lobe
C71.5	Ventricle, UNS
C72.4	Acoustic nerve
C74	Adrenal gland

C259	Pancreas, NOS	157 C259
C260	Intestinal tract, NOS	1539 C260
C268	Overlapping lesion of digestive system	1993 C268
C269	Gastrointestinal tract, NOS	1993 C269
C300	Nasal cavity	1600 C300
C301	Middle ear	1601 C301
C310	Maxillary sinus	1602 C310
C311	Ethmoid sinus	1607 C311
C312	Frontal sinus	1607 C312
C313	Sphenoid sinus	1607 C313
C318	Overlapping lesion of accessory sinuses	1609 C319
C319	Accessory sinus, NOS	1609 C319
C320	Glottis, vocal cords, NOS	161 C320
C321	Supraglottis (epiglottis)	161 C321
C322	Subglottis	161 C322
C323	Laryngeal cartilage	161 C323
C328	Overlapping lesion of larynx	161 C329
C329	Larynx, NOS	161 C329
C339	Trachea	1620 C339
C340	Main bronchus	1621 C340
C341	Upper lobe, lung	1621 C341
C342	Middle lobe, lung	1621 C342
C343	Lower lobe, lung	1621 C343
C348	Overlapping lesion of bronchus or lung	1621 C349
C349	Lung, NOS	1621 C349
C379	Thymus	1952 C379
C380	Heart, pericardium	1975 C380
C381	Anterior mediastinum	164 C381
C382	Anterior mediastinum	164 C382
C383	Mediastinum, NOS	164 C383
C384	Pleura, NOS	1622 C384
C388	Overlapping lesion of heart, mediastinum, and pleura	1999 C399
C390	Upper respiratory tract, NOS	1999 C390

Table W1. Translation of site codes from ICD-O/3 to ICD-7 and ICD-O/2 / ICD-10

ICD-O/3		ICD-7	ICD-O/2 / ICD-10
C398	Overlapping lesion of respiratory system and intrathoracic organs	1999	C399
C399	Ill-defined sites within respiratory system and other intrathoracic organs	1999	C399
C400	Long bones of upper limb, scapula and associated joints	1964	C400
C400	Plasmacytom of long bones of upper limb, scapula and associated joints	203	C902
C401	Short bones of upper limb and associated joints	1965	C401
C401	Plasmacytom of short bones of upper limb and associated joints	203	C902
C402	Long bones of lower limb and associated joints	1967	C402
C402	Plasmacytom of long bones of lower limb and associated joints	203	C902
C403	Short bones of lower limb and associated joints	1968	C403
C403	Plasmacytom of short bones of lower limb and associated joints	203	C902
C408	Overlapping lesion of bones, joints and articular cartilage of limbs	1969	C409
C408	Plasmacytom of overlapping lesion of bones, joints and articular cartilage of limbs	203	C902
C409	Bone and cartilage of limb, NOS	1969	C409
C409	Plasmacytom of bone and cartilage of limb, NOS	203	C902
C410	Bones of skull and face and associated joints	1960	C410
C410	Plasmacytom of bones of skull and face and associated joints	203	C902
C411	Mandible	1961	C411
C411	Plasmacytom of mandible	203	C902
C412	Vertebral column	1962	C412
C412	Plasmacytom of vertebral column	203	C902
C413	Rib, sternum, clavicle and associated joints	1963	C413
C413	Plasmacytom of rib, sternum, clavicle and associated joints	203	C902
C414	Pelvic bones, sacrum, coccyx and associated joints	1966	C414
C414	Plasmacytom of pelvic bones, sacrum, coccyx and associated joints	203	C902
C418	Overlapping lesion of bones, joints and articular cartilage	1969	C419
C418	Plasmacytom of overlapping lesion of bones, joints and articular cartilage	203	C902
C419	Bone, cartilage, joint, NOS	1969	C419
C419	Plasmacytom of bone, cartilage, joint, NOS	203	C902
C440	Malignant melanoma of lip	1903	C430
C441	Malignant melanoma of eyelid, including canthus	1901	C431
C442	Malignant melanoma of ear and external auricular canal	1902	C432
C443	Malignant melanoma of other and unspecified parts of face	1903	C433
C444	Malignant melanoma of scalp and neck	1904	C434
C445	Malignant melanoma of trunk, axilla, inguinal area, perineum	1905	C435
C446	Malignant melanoma of upper limb, including shoulder	1906	C436
C447	Malignant melanoma of lower limb including hip region	1907	C437
C448	Overlapping lesion of malignant melanoma of skin	1909	C439
C449	Malignant melanoma of skin, unspecified	1909	C439
C440	Skin of lip, NOS	1913	C440
C441	Skin of eyelid, canthus	1911	C441
C442	External ear, external auditory canal	1912	C442
C443	Skin of other and unspecified parts of face	1913	C443
C444	Skin of scalp and neck	1914	C444
C445	Skin of trunc, axilla, inguinal region, and perineum	1915	C445
C446	Skin of upper limb and shoulder	1916	C446
C447	Skin off lower limb and hip	1917	C447
C448	Overlapping lesion of tumor of skin	1919	C449
C449	Skin, NOS	1919	C449
C470	Peripheral nerves and autonomic nervous system of head, face and neck	1933	C470
C471	Peripheral nerves and autonomic nervous system of upper limb and shoulder	1933	C471

Table W1. Translation of site codes from ICD-O/3 to ICD-7 and ICD-O/2 / ICD-10

ICD-O/3		ICD-7	ICD-O/2 / ICD-10
C472	Peripheral nerves and autonomic nervous system of lower limb and hip	1933	C472
C473	Peripheral nerves and autonomic nervous system of thorax	1933	C473
C474	Peripheral nerves and autonomic nervous system of abdomen	1933	C474
C475	Peripheral nerves and autonomic nervous system of pelvis	1933	C475
C476	Peripheral nerves and autonomic nervous system of trunk and back	1933	C476
C478	Overlapping lesion of peripheral nerves and autonomic nervous system	1939	C479
C479	Peripheral nerves and autonomic nervous system, NOS	1939	C479
C480	Retroperitoneum	1974	C480
C481	Specified parts of peritoneum	158	C481
C482	Peritoneum, NOS	158	C482
C488	Overlapping lesion of retroperitoneum and peritoneum	158	C482
C490	Connective tissue of head, face, and neck	1970	C490
C491	Connective tissue of upper limb and shoulder	1972	C491
C492	Connective tissue of lower limb and hip (excl gluteal region)	1973	C492
C493	Connective tissue of thorax (excludes thymus, heart and mediastinum)	1977	C493
C494	Connective tissue of abdomen	1977	C494
C495	Connective tissue of pelvis	1977	C495
C496	Connective tissue of trunk and back	1971	C496
C498	Overlapping lesion of connective tissue	1979	C499
C499	Connective, subcutaneous and other soft tissue, NOS	1979	C499
C500	Nipple and areola	1701-2	C500
C501	Central portion of breast	1701-2	C501
C502	Upper-inner quadrant of breast	1701-2	C502
C503	Lower-inner quadrant of breast	1701-2	C503
C504	Upper-outer quadrant of breast	1701-2	C504
C505	Lower-outer quadrant of breast	1701-2	C505
C506	Axillary tail of breast	1701-2	C506
C508	Overlapping lesion of breast	1707-8	C509
C509	Breast, NOS	1701-2	C509
C510	Labium majus, Bartholin's gland	1767	C510
C511	Labium minus	1767	C511
C512	Clitoris	1767	C512
C518	Overlapping lesion of vulva	1760	C519
C519	Vulva, NOS	1760	C519
C529	Vagina, NOS	1761	C529
C530	Endocervix	171	C530
